

SmartWay Logistics

We are SmartWay Your 4PL Partner

SmartWay Logistics is your European fourth-party logistics provider driven by sustainability.

We come up with out-of-the-box solutions backed by data and 100 years transport expertise. This leads to efficient and sustainable solutions brought to you by our control tower services. We optimize logistics processes by using data, adding business rules, and applying smart algorithms.

With more than 3.000 carriers in our continuously curated carrier database you have the benefit of a solid coverage throughout Europe by any preferred transport modality. Our automated freight planning chooses the best matching carriers for your products based on your specific order requirements.

This way, our control tower handles over 635.000+ shipments annually across Europe.

Sustainable transport services

SmartWay Logistics offers a wide range of 4PL services. With our in-house experts, we can advise you on a consulting basis or coordinate any preferred control tower functionalities on your behalf.

It's our mission to deliver the best sustainable logistic solution with fairness and respect for people and society.

Carrier management

Be in control: to move your goods on time, within budget and conform to other preferred constraints, you need enough carrier capacity and management of 'your' carriers.

Strengthen your insight and control with integrated carrier management services.

Freight management

Smart planning for co2-reduction: transport has become a specialized field, and the transport market offers so many choices that making decisions can be challenging.

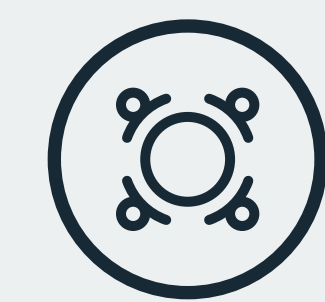

SmartWay Logistics can help you with strategic, tactical, operational planning, and releasing you from the execution of the transport planning.

Freight audit & payment

Insight at a glance: Keep track of your costs with a real-time updated financial dashboard, and control your expenses.

With the Freight Audit & Payment service, you know precisely what has already been invoiced and which invoices are still to be expected, always and everywhere.

Reporting & analytics

Make data-driven decisions: you want to make optimal business decisions backed with data. Therefore, you need valuable operational insights at hand to keep track of your logistics KPIs.

Using business intelligence tools, we provide instant access to your key figures anytime and anywhere.

Supply chain optimization

Save time, money and the planet: as a shipper, you want your supply chain to be reliable, flexible and cost-efficient.

Thanks to our hands-on transport mentality and data-driven focus as a 4PL provider, we can optimise your supply chain to meet your performance levels.

Slot booking services

Book slots in just 3 clicks: as a shipper, you are constantly busy ensuring loads are received efficiently at your sites and reach their destination with no mistakes or problems.

Avoid disruption and inefficiency, such as an inefficient schedule, high stock levels and waiting hours for drivers.
